                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tisdall D.J.;

Tisdall D.J.;

Namitted (MAR-1996) to the EMBL/GenBank/DDBJ databases.

I- FUNCTION: RECEPTOR FOR ACTIVIN A, ACTIVIN B, AND INHIBIN A.

INVOLVED IN TRANSMEMBRANE SIGNALING.

I- CATALTTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

SUBCELLULAR LOCATION: Type I membrane protein.

SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

TGFB RECEPTOR SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PROSITE; PS00107; PROTEIN_KINASE_ATP; FALSE_NEG.

"Bovine activin receptor type II cDNA: cloning ar
*Fluorescent in situ localization of the bovine activin receptor IIA locus on chromosome 2 (3q2.3-2.4).*; Mamm. Genome 7:869-869(1996).

-I- FUNCTION: RECEPTOR FOR ACTIVIN A, ACTIVIN B, AND INHIBIN A.
-I- FUNCTION: TRANSMEMBRANE SIGNALING.
-I- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-I- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                   BOVIN

SÉQUENCE FROM N.A.

ILIMUTA T., Olda S.;

SUBMILLEG (NOV-1994) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: RECEPTOR FOR ACTIVIN A, ACTIVIN B, AND INHIBIN A.

-I- FUNCLYED IN TRANSMEMBRANE SIGNALING.

-I- CATALYIC ACTIVITY: ATP + a protein - ADP + a phosphoprotein.

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISUE-Testis;

Muramatsu M., Shiokawa K.;

Activin receptor mrna is expressed early in Xenopus embryogenesis

and the lavel of the expression affects the body axis formation.*;

Biochem. Biophys. Res. Commun. 181:684-690(1991).

I FUNCTION: RECEPTOR FOR ACTIVIN A, ACTIVIN B, AND INHIBIN A.

I FUNCLYED IN TRANSPEMBRANE SIGNALING.

I SUBCELLULAR LOCATION: Type I membrane protein.

SUBCELLULAR LOCATION: Type I membrane protein.

SIMILARIY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

TGFB RECEPTOR SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               XENLA

Sequence 2, Application US/09329418

Patent No. 6096539

GENERAL INFORMATION:

APPLICANT: ZENECA Limited

TITLE OF INVENTION: PROTEIN ACTIVATOR OF APOPTOSIS

FILE REFERENCE: PHM.70536

CURRENT APPLICATION NUMBER: US/09/329,418

CURRENT FILING DATE: 1999-06-11

NUMBER OF SEQ ID NOS: 39

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 2

SEQ ID NO 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        alignment_block:

                                                                                                                                                                                         The patent discloses the use of novel apoptotic proteins and related complete involved in apoptosis modulation. Expression vectors comprising the Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be seen to transform host cells. Apop DNA can be used to make polyclonal and monoclonal antibodies for use in immunotherapy. The proteins are useful in treating apoptosis mediated disorders including cell loss and degenerative disorders. Drug candidates that affect Apop Dioactivity are identified by screening. The present sequence encodes to Apop3 protein. This was identified using RIP (receptor-interacting system. Human Apop3 is expressed in heart, liver, pancreas, placenta, and lung. Overexpression of Apop3 inhibits TNF (tumour necrosis factor) alpha-induced caspase activation without affecting TNFalpha-induced caspase activation without affecting TNFalpha-induced caspase activation without affecting TNFalpha-induced caspase activation without affecting TNFalpha-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 2; Fig 5; 64pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel apoptotic proteins Apop1, Apop2 and Apop3 and acids encoding them for use in screening modulators diagnosis and treatment of diseases

                                                                                                                                                                                                                                                                                                                                                                                                                            The kinase of death (KOD) polypeptide is integral to the activation process of cellular apoptosis (programmed cell death). Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from aberrant apoptosis may be dire. Cencer and autoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzheimer's disease when there is too much apoptosis. The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as se for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CDS

XX New human protein activator protein, useful for treating dysfunctional PT apoptosis conditions and in screening assays to identify agonists which PT apoptosis conditions and in screening assays to identify agonists which PT apoptosis conditions and in screening assays to identify agonists which PT apoptosis conditions and in screening assays to identify compounds that modulate the biological and/or CC methods to identify compounds that modulate the biological and/or CC pharmacological activity of the activator and hence regulate apoptosis. The nucleic acid and amino acid sequences of the kinase CC of death (KOD) are useful for identifying compounds that modulate CC the biological and/or pharmacological activity of a native mediator of ascreening assays to identify agonists which agonise or mimic CC screening assays to identify agonists which agonise or mimic CC prolong the biological half-life of the molecule in vivo or in vitro. CC The present DNA sequence is the coding region of human KOD protein activator of apoptosis.

XX Sequence 1557 BP; 395 A; 422 C; 448 G; 291 T; 1 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1551 GAAA 1554
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1351
                                                            The invention relates to primers for synthesising full length cDNA clones. 830 CDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5. and 3. ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        501

                                                                                                                                                                                                                      The present sequence encodes a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and the aponist sand the aponist of HRIP polypeptide. HRIP and its agonist or antagonist and the are useful for treating a disease or condition associated with decreased or increased expression of functional HRIP. Diseases treated or diagnosed include neurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral meningitis and other developmental disorders of the central nervous system, neuromuscular disorders, myasthenia gravis, cell proliferative disorders such as actinic keratosis, arterioselerosis, atherosclerosis and cancer including leukacemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, ovary, autoimmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency diseases, allergies, bronchitis, diabetes mellitus, rheumatoid arthritis, microbial infection and trauma.

                                                                                                                                                                                                                                                                                                                                                                                                    The kinase of death (KOD) polypeptide is integral to the activation process of cellular apoptosis (programmed cell death). Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from aberrant apoptosis may be dire. Cancer and sutoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzheimer's disease when there is too much apoptosis. The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis.
                                                                                                                                                                   315

The nucleic acid and amino acid sequences of the kinase of death (KOD) are useful for identifying compounds that modulate the biological and/or pharmacological activity of a native mediator of apoptosis, for treating dysfunctional apoptosis conditions, in screening assays to identify agonist which agonise or minic biological and/or pharmacological activity, induce production of or prolong the biological half-life of the molecule in vivo or in vitro. The present sequence is a cDNA encoding human KOD protein activator of the molecule in vivo or in vitro.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1665
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1565
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1515
                                                                                                                                               The present invention relates to human protein kinase. The proteins are from new human genes termed hi283, h1418, h1483, h1590, h15993, h16341 and h225. The proteins may be used to identify modulators of their activity. The proteins may also be used to derive products for the treatment of cellular growth related disorders, mailgnancles, cancers, immne, inflammatory, respiratory, haematological and bone-related disorders.
                                                                                                                                                                                                                                                                                      New protein kinase polypeptides, nucleic acids and anti-kinase antibodies, useful for diagnosing and treating e.g. cancer, inflammatory, immune, cardiovascular and bone disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                           30-JUN-1999; 99US-0345473.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC AAX54951 to AAX64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-delived cells. AAK64703
CC cancers and cancer metastases of haematopoietic antigen genomic
CC sequences from the present invention. AAK34942 to AAK84950 and AAM82169
CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Align seg 1/1 to: AAK70413 from: 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3739
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3689
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3639
The present sequence is that of the coding region of cDNA encoding rat RIP-3-like-death-associated kinase (R3DAK, see AAB20345), a member of the RIP3 family, which is known to be involved in apoptosis. The cDNA was obtained from a rat dermal papilla cell library. The invention provides R3DAK polypeptides and polynucleotides, expression vectors, recombinant host cells, and methods of producing a recombinant R3DAK polypeptide, as well as antibodies, a method of designing an R3DAK polypeptide, a webla of the 3-dimensional structure of a R3DAK polypeptide, a method of using such compounds that alter R3DAK kinase activity, and for using such compounds. R3DAK, its fragments, variants, antagonists, agonists, antibodies and binding partners are useful for treating; bacterial, viral or protozoal infections; cardiovascular disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RIP-3-like death-associated kinase; R3DAK; rat; antibacterial; virucide; protozoacide; cardiant; antiinflammatory; vasotropic; antidiabetic; antitumour; analgesic; immunosuppressive; antithyroid; antiulcer; nephrotropic; cytostatic; nootropic; anticonvulsant; hepatotropic; antiallergic; antigout; dermatological; osteopathic; antiarthritic; uropathic; ophthalmological; antiparkinsonian; antipsoriatic; neuroprotective; pulmonary; hormonal; apoptosis; gene therapy; vaccine; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               494

(I) co proteins and polynucleotides may be used in the prevention, diagnosis and cates associated with inappropriate (I) expression. For caxenple, they may be used to treat disorders associated with decreased compression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expression in a patient's genome contact and the patients own production of (I). Additionally, (I) complynucleotides may be used to produce the secreted (I), by inserting contact activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) conjuncted activity and bost cell and culturing the cell to express the conjuncted activity and polynucleotides may be used to prevent, concers and treat immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic actived cells. ARK64703 concers and cancer metastases of haematopoietic actived cells. ARK64703 concers and cancer metastases of haematopoietic actived cells. Concers and Ammental concers and cancer metastases of haematopoietic actived cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         17-NOV-2000

                                                                                                                                                                                                                                                           The invention relates to novel isolated polypeptides (I), and CC polynucleotides (II). (II) and the antibody to (I) are useful for CC diagnosing, preventing and treating diseases including immune system CC disorders (e.g. congenital and acquired immunodeficiencies, autoimmune CC disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ CC transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, hemoglobin abnormalities and CC other blood-related disorders (sickle cell anaemia), myeloproliferative CC disorders, primary hematopoletic disorders, hyperpoliferative CC disorders (e.g. Gaucher's disease and cancer), neurodegenerative CC disorders (e.g. Alzhalmer's disease, parkinson's disease), chromosomal CC disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. stroke), renal CC disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. atrhythmia), respiratory disorders, dermatological disorders (e.g. atrhythmia), respiratory disorders, dermatological disorders (e.g. disorders), reproductive system disorders, gastrointestinal CC disorder (inflammatory disorders), liver disorders, gastrointestinal CC disorder (inflammatory disorders), liver disorders, activators of T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS26976-AAS27850 represent novel signal transduction pathway protein coding sequences and PCR primers of the invention.
                                                                                                                                                                                                                                                             Align seg 1/1 to: AAS27210

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nuclectide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqn-emb1/NA2001A.DAT:AAK93863
                              The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the homology searches to identify the clone. Hote: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           515

                                                                                    The present sequence encodes a novel protein kinase. The nucleic acids cc and the protein kinases they encode may be used in the treatment and cc diagnosis of diseases associated with inappropriate kinase expression cc such as immune-related diseases and disorders, cardiovascular disease. Cneurodegenerative diseases and/or cancers. The nucleic acids and cc complementary sequences may also be used as DNA probes in diagnostic cc assays. The kinase polypeptides may be used as antigens in the production cc of antibodies of kinase expression and activity. Anti-kinase antibodies cand kinase antagonists may also be used to down regulate kinase and cc expression and activity. Diseases related to kinase expression and cc disorders, complications of organ transplantation, myocardial infarction, cc disorders, cardiomyopathies, strokes, renal failure, convolutions of organ transplantation, myocardial infarction, containing the stress related disorders, chronic inflammatory polvic disease, multiple sclerosis, asthma, cs osteoarthritis, psoriasis, rhinitis, autoimmunity, diabetes, cancers and cc reproductive disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding kinase polypeptides, useful for diagnosing treating immune-related diseases and disorders, cardiovascular dineurodegenerative diseases and/or cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;
